Proficient in Microsoft Solutions Development methodologies and able to develop user-friendly web and forms applications, write functional, maintenance and technical documents, develop user form workflows, and maintain company design standards in applications.

EXPERIENCE

02/2019 – present

ALEXANDER FORBES – JOHANNESBURG

Forms & Website Developer & Authoring

- Design, code, and maintain company-wide forms/web apps using the designs provided, ensuring accuracy & attention to detail.
- Write functional, maintenance and technical documents.
- Write clean, efficient, and maintainable code using HTML, CSS, and JavaScript.
- Translate design concepts into interactive digital experiences.
- Troubleshoot and resolve bugs, issues, and inconsistencies.
- Develop responsive and cross-browser compatible web applications that function across different devices and platforms.
- Liaise with business users to ensure a consistent and intuitive design that aligns with organizational branding and user requirements.
- Communicate effectively with cross-functional team members, including designers, back-end developers, and project managers
- Working with designers and back-end developers, they translate visual designs and user interface mock-ups into responsive, interactive, and engaging web experiences.
- Change management processes for service account password updates & maintenance.
- Develop user form workflows using HTML, CSS & vanilla JS on SharePoint Designer.
- Integrate SharePoint-based workflows and processes into the user interfaces.
- Manage backend form data and records ensuring that it meets business requirements and passes audit checks & procedures.
- Enhancing data capture, workflow automation, and user interactions within the organization's digital ecosystem using InfoPath
- Implement form logic, dynamic fields, and conditional formatting to optimize user interactions.

- Integrate front-end interfaces with SharePoint sites and solutions.
- Utilize SharePoint Designer or other relevant tools to enhance the user experience and ensure smooth data exchange between the front-end and SharePoint backend.

08/2017 – 01/2019

ALEXANDER FORBES – JOHANNESBURG

Kofax Forms Designer

- Design and develop electronic forms using Kofax technologies, ensuring they meet business requirements and user experience standards.
- Utilize Kofax TotalAgility or other relevant Kofax products to create dynamic and interactive forms
- Translate business requirements into technical specifications for form development.
- Conduct testing of forms to ensure functionality, usability, and data accuracy.
- Integrate with existing systems, databases, or workflow processes to ensure seamless data flow
